

## Here's What These Satisfied Customers Say About RejeX

### Unmatched Protection

"After a month of building up road crud, the side of the [car] treated with RejeX came clean with one swipe of the sponge, but the other side needed a lot more scrubbing. Brake dust washed off the RejeX-side wheels with plain water."

**CAR and DRIVER Magazine**

### Nice Deep Shine

"I use it on my motorcycle helmets, the painted surfaces on the motorcycle and also the clear plastic visor and windscreen. It leaves a very smooth surface feel.... unlike any other polish I've ever used. It leaves a very nice shine and seems to deepen the colors."

**webBikeWorld**

### Superior Durability

"I could not believe my eyes this weekend when I washed my car after four months of winter filth and salt. The paint is perfect and water beads better than a fresh wax job! Truly unbelievable. I'm telling everyone I can about your product."

**Andy Steinman, Columbus, OH**

### What All the Best Dressed Automobiles are Wearing

"RejeX is great! Just wanted to mention that RejeX works like a charm. In the nine months that I've owned my car, I have yet to have to wash it. I just wipe it down once a week with detail spray and it's good as new. RejeX is a very good product and I've let people know."

**Kirby Fong, San Francisco, CA**

### Award Winning Shine

"RejeX makes the metal flake on our show boat look so good – the colors are deeper and the reflections are brighter than anything I've ever seen before."

**George Mayer, Plano, TX**

**MasterCraft 35th Anniversary Homecoming Reunion  
First Place in Class Mid American Region Best of Show**

### Stays Clean

"What makes RejeX stand out from other polishes is not just its ability to keep the boat cleaner longer, but the fact that it works on just about every non-porous surface."

**Southern Boating**

*Nothing Sticks but the Shine™*

# REJEX®

**High Gloss Finish that Protects  
Eliminates Waxing and Polishing**

# REJEX<sup>®</sup>

## Provides Space Age Protection and Keeps a Deep Shine on Car, Truck, Boat, Motorcycle and Aircraft

RejeX is an advanced polymer treatment that seals painted surfaces, metal, gel coats, glass and acrylic to prevent environmental damage to vehicle finishes. It is not just a wax or a polish. RejeX forms a slick, long-lasting barrier to protect the vehicle surface against acidic bird droppings, exhaust stains, grease, tar and other dirt and grime while providing a deep, lustrous shine.

It is safe to use RejeX on glass, acrylic, fiberglass, glossy plastics, vinyl graphics and clear plastic protective films. Each treatment can last up to six months or longer. A bottle of RejeX is sufficient to treat approximately 3 to 5 cars.

Originally developed for the aerospace industry for use on airplane surface and windshield, the non-abrasive RejeX can also be used on glass windows and acrylic windshields to help repel rain. When used on tyre rims, it makes cleaning of break dust easy and leaves a shine on the metal.

RejeX does not contain free silicone oils found in some other products that are known to contaminate paint and cause problems when repainting. If a RejeX-treated surface needs repainting, normal paint preparation is all that's required.

The US Air Force tested RejeX on UH-60 Black Hawk helicopters. The following photos were taken after 80 hours of flying time and many washes. See the striking difference on the side of the fuselage protected by RejeX.

*UH-60 left side exhaust track unprotected*

## And it is Easy to Use and Saves Time

To get a mirror-like finish that will last for months, just apply a thin film of RejeX with a soft, clean cloth on the surface, let it dry to a haze in about 20 minutes, and finally wipe it off effortlessly with another soft cloth. For best results, allow it to cure for 8-12 hours out of the elements (such as rain and direct sunlight).

It's that easy! No extensive rubbing or buffing is required. Protecting your vehicle with RejeX will save countless hours of cleaning and scrubbing. Most stains and grime won't stick and usually come off with just a stream of water or a wet cloth.

With RejeX, there is no need for polish or wax on paint that is in good condition.

Be sure that the surfaces to be treated are clean, dry, and cool to the touch. Do not apply in direct sunlight or in temperatures greater than 29 degrees Celsius. RejeX may be used on top of other waxes or polishes. However, for maximum durability apply the product directly to the surface being treated. The abrasives found in most polishes will remove the RejeX protection.

## GUARANTEE

If you're not convinced that it does everything we say, we'll give you your money back.

**NO IFs, ANDs OR BUTs!**
